PROJECTS

Mortgage Calculator Developed a Mortgage Calculator in Java employing Object-Oriented Design principles to enhance modularity and maintainability. The program leverages a class-based architecture to calculate monthly mortgage payments and generate a detailed payment schedule. Outcome - Demonstrates proficiency in Object-Oriented Design, ensuring a modular and scalable structure for future enhancements. Enhances maintainability and code readability through the encapsulation of functionalities within dedicated classes. (GitHub Link)

Virtual ATM Virtual ATM application, developed in Java with Swing, AWT, and MySQL integration, provides a user-friendly interface for managing banking transactions. Users can seamlessly perform various operations similar to a traditional ATM, including login, signup, deposit, and withdraw money. The application offers a secure and convenient way for individuals to interact with their accounts.
